### All About ME

- Hello! Welcome to Arches Academy! My name is Michaela King. I am a new teacher here at Arches, and I cannot wait to teach your little ones! I am currently pursuing my Master's at Western Governors University in Elementary Education, and I received my Bachelors at BYU-Idaho in Early Childhood Special Education. I love teaching children and as cliché as it might sound, it truly is my passion to take part in their learning journeys and help them realize their full potential. My motto is You are better than you think you are and you can do anything you set your mind to! I cannot wait to work with you and your children this school year!

### Drama

- For this age group, we will experience drama in the form of dramatic play. The children will be provided with props and sometimes simple costume pieces to help support their imaginative play. For example, one unit we might do camping, another might be house/kitchen, and another might be post office!

## Music

- Music will consist of children's songs, sometimes with actions or even props to enrich the musical experience. We will use instruments at times as well! Music also provides us the opportunity to practice our pieces for the all school play and the school gala!

## PE

- PE is all about moving our bodies and loving our bodies for all the things they can do! We will play lots of games indoors and outdoors using equipment and sometimes just our bodies!

## Art

- Art is one of my favorite subjects we will be doing! We will explore art through different mediums and styles, and your children will have many beautiful projects to decorate our classroom, and for them to bring home so you can enjoy their art with the family! They will also have several projects displayed in the Gala this December!

## STEAM

- STEAM stands for Science, Technology, Engineering, Art, Math. STEAM provides students with several different ways to explore innovation through these subjects. It will give students a taste of their future experience with these subjects as well.

## World Cultures and Languages

- This specialty will focus mostly on cultures and ways of life around the world. We will learn about traditions, foods, music, lifestyles, etc! It will be such a great opportunity to enrich our students' understanding of people around the world, including their own classmates!
